

Sheet 3
BST - AVL

1 Question 1

For the numbers [80, 20, 100, 10, 40, 90, 30, 50, 35], show the result and the intermediate steps for each of the following.

- Build a BST.
- Give the pre-order, in, and post order traversal of the tree.
- Redraw the above BST after 95 is added and 20 is deleted.
- Redraw the above BST after 39 is added and 40 is deleted.
- Is the above BST balanced? If not, redraw it after rebalancing.

2 Question 2

Consider the following tree:

- What is the pre-order traversal of the tree?
- What is the in-order traversal of the tree?
- What is the post-order traversal of the tree?
- Identify if it is a tree, binary tree, BST, AVL tree. Explain why/why not in each case.
- Based on your previous answer, draw the tree obtained by inserting 10 into the tree. (Show the steps)
- Draw the tree obtained by deleting 2 from the tree. (Show the steps)
- Draw both trees that might be obtained by deleting 4 from the tree while still maintaining the properties in your answer to (e)

3 Question 3

- Draw an AVL tree after inserting [17, 8, 5, 7, 4, 6, 15, 2, 0, 3] in order. Show intermediate steps after each insertion, clearly label each step.
- Derive a precise expression for the minimum and maximum number of nodes in an AVL tree of height h .
- Derive a precise expression for the minimum and maximum height of an AVL tree with n nodes.

4 Question 4

Draw the tree after deleting values from each of the following AVL trees and show the balancing operations.

a)

b)

c)

d)

5 Notes

- You are required to submit a PDF of your answers and your ID in teams before 11:59 AM.
- You are encouraged to ask any questions on teams, or in person.

Good Luck
