

second assignment of c programing .

Student Name : محمد ابراهيم محمد السعيد ابراهيم

Id : 18011342

Section or lab : 8

Electrical communication engineering.

Code1:-

```
#include <stdio.h>

#include <stdlib.h>

int main()
{
    int x , y ;

    printf("Hi this program is designed to know which quarter that any point lies \n");
    printf ("now lets start\n");
    printf("now we need you to enter the coordinates of any point \n");
    printf("please enter the first coordinate value x\n");
    scanf("%d",&x);
    printf("please enter the second coordinate value y\n");
    scanf("%d",&y);

    if (x>0){
        if (y>0){
            printf(" the (%d,%d) point lies in the 1st quarter.. \n",x,y);
        }
    }
```

```
else if (y<0){

    printf(" the (%d,%d) point lies in the 4th quarter.. \n",x,y);

}

else if (y==0){

    printf(" the (%d,%d) point lies in the middle between the 1st quarter and 4th quarter.. \n",x,y);

    printf("on the +ve x axis\n");

}

}

else if (x<0){

    if (y>0){

        printf(" the (%d,%d) point lies in the 2nd quarter.. \n",x,y);

    }

    else if (y<0){

        printf(" the (%d,%d) point lies in the 3rd quarter.. \n",x,y);

    }

    else if (y==0){

        printf(" the (%d,%d) point lies in the middle between the 2nd quarter and 3rd quarter.. \n",x,y);

        printf("on the -ve x axis\n");

    }

}

else if (x==0){

    if (y==0){

        printf(" the (%d,%d) point lies in the center.. \n",x,y);
```

```
}  
  
else if (y<0){  
    printf(" the (%d,%d) point lies in the middle between the 3rd quarter and 4th quarter.. \n",x,y);  
    printf("in the -ve y axis\n");  
}  
  
else if (y>0){  
    printf(" the (%d,%d) point lies in the middle between the 2nd quarter and 1st quarter.. \n",x,y);  
    printf("in the +ve y axis\n");  
}  
  
}  
  
return 0;  
}
```

Code 2

```
#include <stdio.h>

#include <stdlib.h>

int main()
{
    int year ;

    printf("please enter the year number to know if it is a leap year or not\n");

    scanf("%d",&year);

    if (year%4==0){
```

```
if (year%400==0){
    printf("year %d is a leap year\n",year);
}

else if (year%100==0){
    printf("year %d is not a leap year\n",year);
}

else {
    printf("year %d is a leap year\n",year);
}

}

else {
    printf("year %d is not a leap year\n",year);
}

return 0;
}
```

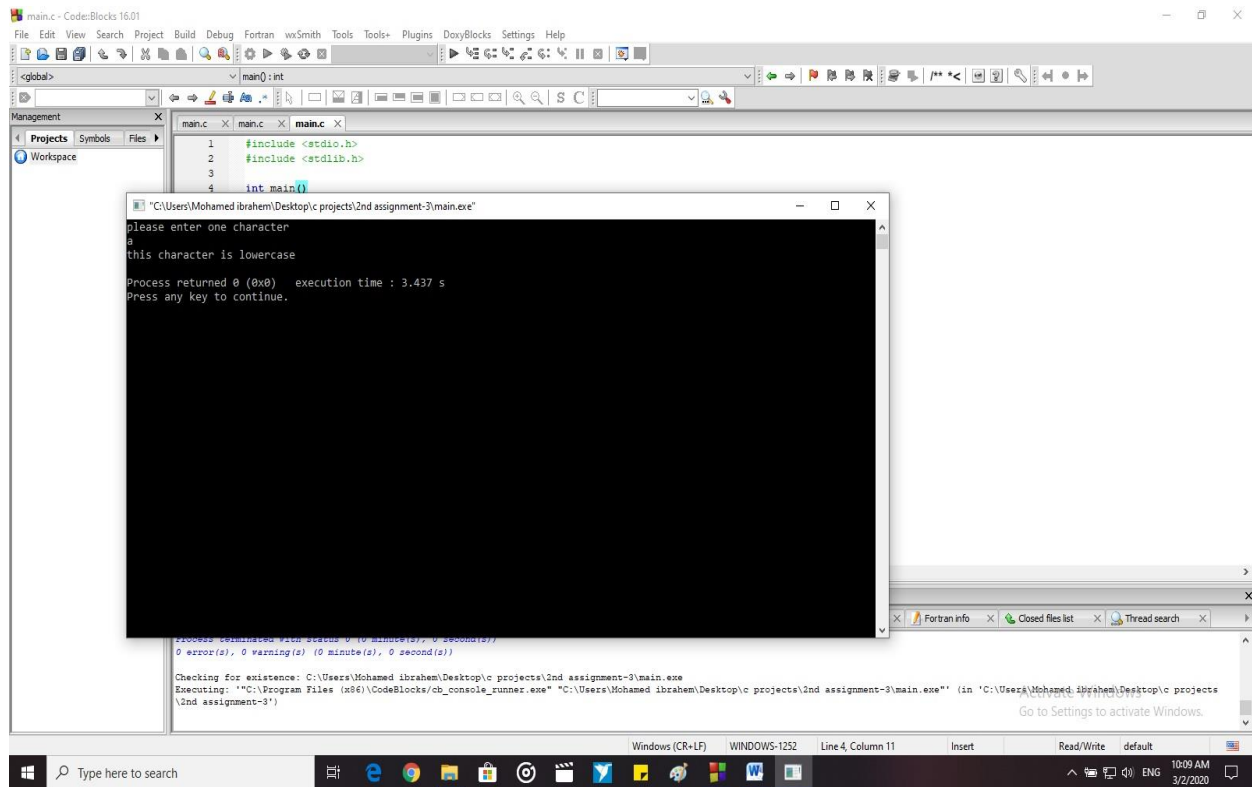

Code 3

```
#include <stdio.h>

#include <stdlib.h>

int main()
{
    int y;
    char x ;
    printf("please enter one character\n");
    scanf("%c",&x);
    y=(int)x;
    if (y>64 && y<91){
        printf("this character is uppercase\n");
    }
    else if (y>96 && y<123){
        printf("this character is lowercase\n");
    }
    else {
        printf(" wrong entry, it is not a character \n");
    }

    return 0;
}
```

Code 4:-

```
#include <stdio.h>

#include <stdlib.h>

int main()
{
    int x ,z ,g,h,j,k,l;

    printf("enter a decimal number less or equal 31 \n");

    scanf("%d",&x);

    if (x<=31){

        g=x%2;

        z=x/2;

        x=z;

        h=x%2;

        z=x/2;

        x=z;

        j=x%2;

        z=x/2;

        x=z;

        k=x%2;

        z=x/2;
```

```

x=z;

l=x%2;

printf("the binary is %d%d%d%d%d\n",l,k,j,h,g);

}

else {

    printf(" you entered number more than the maximum which is 31\n");

}

return 0;

}

```

The screenshot shows the Code::Blocks IDE interface. The main editor window displays the C source code. A console window is open, showing the program's execution. The user entered '21' as input. The program output is 'the binary is 10101'. The console also shows 'Process returned 0 (0x0) execution time : 3.350 s' and 'Press any key to continue.'. The status bar at the bottom of the IDE indicates 'Line 13, Column 9'.
